1 Take a sheet of paper and draw a series of horizontal lines.

2 On another sheet, draw vertical lines.

3 Pierce a small hole in one of the sheets with scissors. Then tear a hole of any shape that inspires you to create a window.

4 Now place your window frame over the other sheet. See how the lines play with each other? When you find a design you like, you may glue the sheets together.

You can try with all sorts of lines (straight, curvy, or angled) in black and white, in colors, or with dots, scribbles, and loops! There are endless designs and discoveries to be made.
